

Dremel Improves Moto-Saw

A recent improvement extends the usefulness of the Moto-Saw—the handy electric scroll saw made by Dremel Mfg. Co., Racine, Wis.

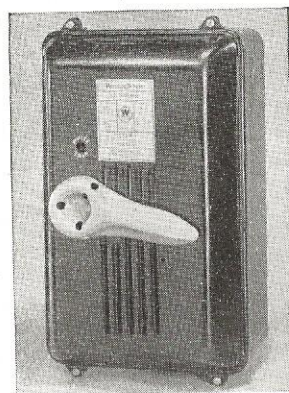

Two additional slots are provided in the blade holder and this enables the operator to engage the saw blade at an angle of 90° to the frame. This simple expedient makes it possible to saw any length of board up to 19" in width.

Turning of the blade is not an innovation on the more expensive bench type electric jig saws, but when working on a long board, some difficulty may be experienced when following designs with a stationary saw on long boards. With the Moto-Saw,

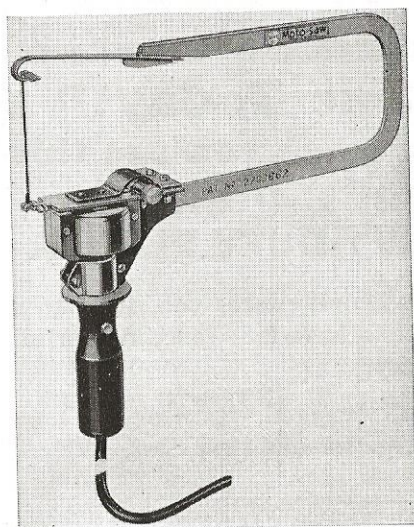

Multi-Breaker for General Use

For use on any normal-duty application that would otherwise require fuses or fused switches, a new low-cost multi-breaker is announced by Westinghouse.

Available in two types, M-1 and M-2, these 15 to 100 ampere, 2 or 3 pole breakers are for use on a-c circuits up to 230 volts. The sheet steel enclosure is dust-resisting (Nema type 1-A) with 10 concentric knock-outs for conduit or cable connections.

In operating, a bimetal thermal element is actuated by overload or short

the board can be held stationary and the saw is guided to follow the design. As the saw weighs only 17 ounces, little effort is required to operate it.

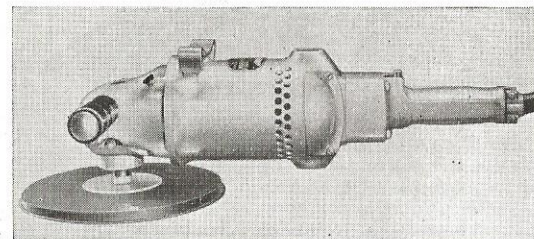

circuit and causes the breaker to trip. However, while the breaker trips immediately on short circuit or dangerous overload, an inverse-time characteristic

allows it to remain closed during temporary harmless overloads. An indicating target on the enclosure cover shows when multi-breaker has tripped.

Black & Decker Announce a Heavy Duty Sander

A 9" heavy duty sander is announced by Black & Decker Mfg. Co., Towson, Md. This new tool is designed for constant production-line use with 9" abrasive discs. It is said to be especially adapted for use with wire cup brushes, saucer grinding wheels for right-angle grinding, and planer heads for wood shaping and surfacing.

This sander's many features include:—a new spindle-lock for quick disc changing, spiral-bevel gears made by B. & D., switch and commutator sealed against abrasive dust and grit, pusher-type steel fan, adjustable side handle for right or left hand use, and a sturdy, full-powered universal motor.

manufactured at each mill, are also indicated in convenient tabular form. Copies of the revised Directory of Membership will be sent free by the Western Pine Ass'n, 510 Yeon Bldg., Portland, Ore.

Story of American Mahoganies

"American Timbers of the Mahogany Family" is the title of a booklet announced by the Mahogany Association, Inc., 75 E. Wacker Drive, Chicago. It contains a map indicating the occurrence of mahogany in Africa, Central and South America and a reprint of an article on American mahoganies by Prof. Samuel J. Record of Yale University.

This authoritative treatise describes the various genera of the mahogany family, where found, conditions of growth, and characteristics. It includes an interesting history of mahogany.
